Private-market investing still runs on spreadsheets

Fragmented tooling

Allocations, vesting and unlocks are tracked by hand across disconnected spreadsheets and chats.

Scattered assets

Positions span multiple wallets, chains and platforms - with no single view of what you actually hold.

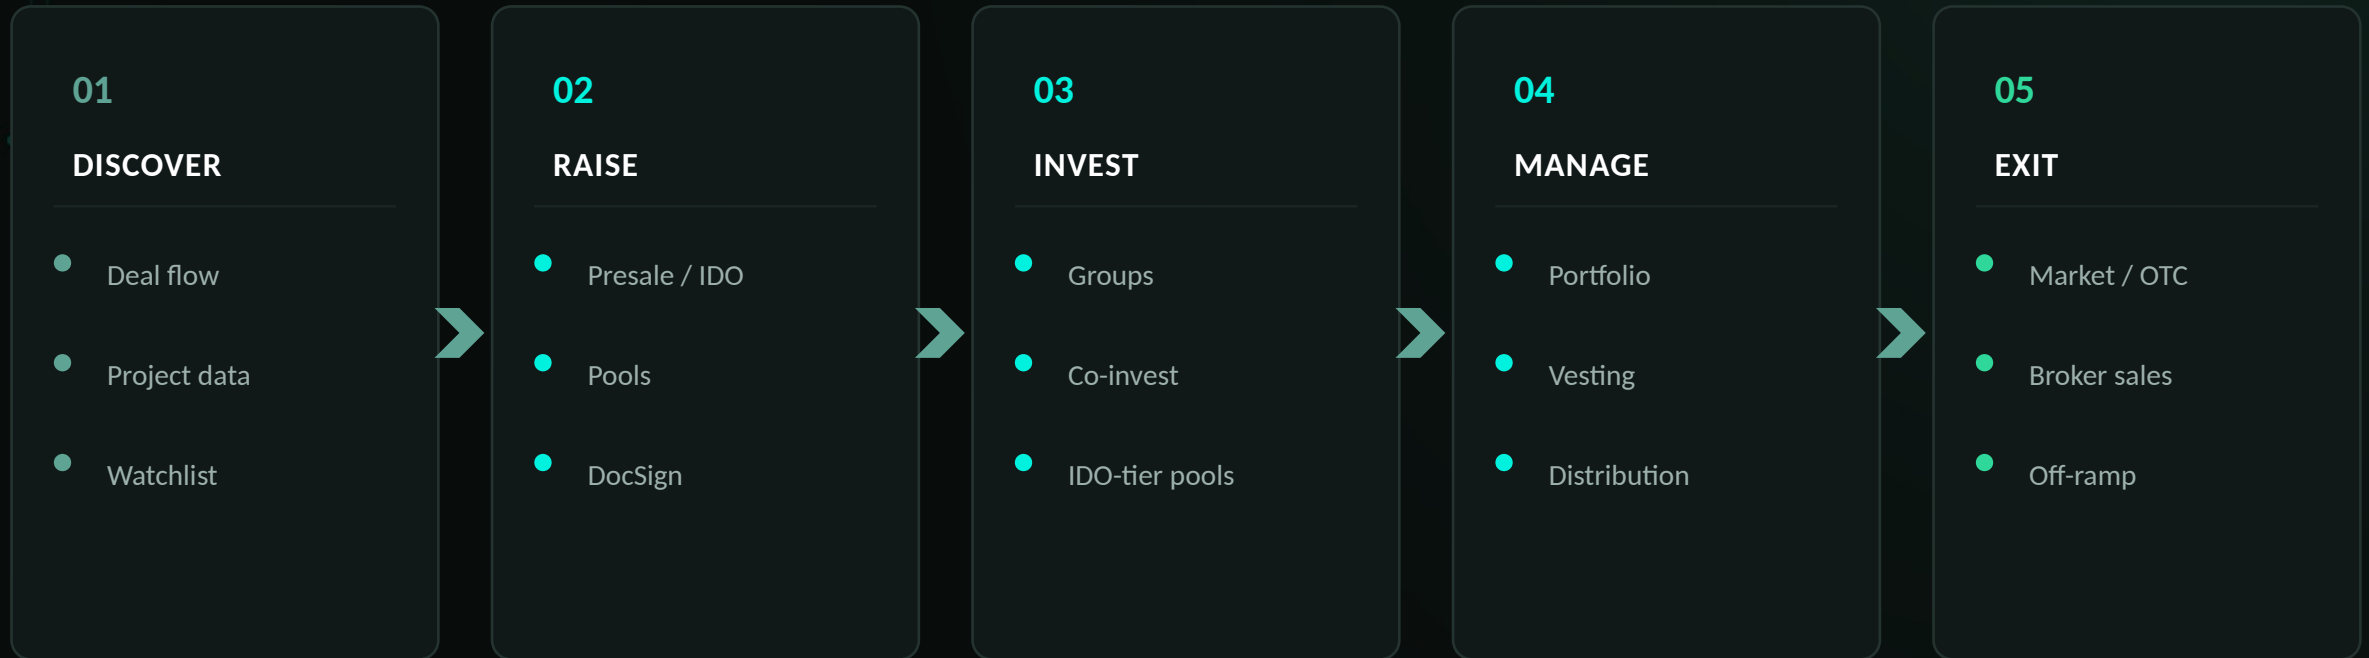

No rails for groups

Syndicates, VCs and communities have no proper way to raise, allocate and manage members together.

The whole lifecycle is manual. Everything that happens before, during and after a raise - discovery, allocation, vesting, distribution and exit - is stitched together by hand. Cryptool replaces that with one system.

Everything in one place - discovery to secondary exit

Capture value before, during and after listing - one login, one data system, no external tools.

Not a prototype. Running today.

Portfolio

Track every asset, allocation and staking position in real time.

Raise

Run funding rounds from project creation to distribution.

Market

Trade allocations directly or through broker listings.

Invest

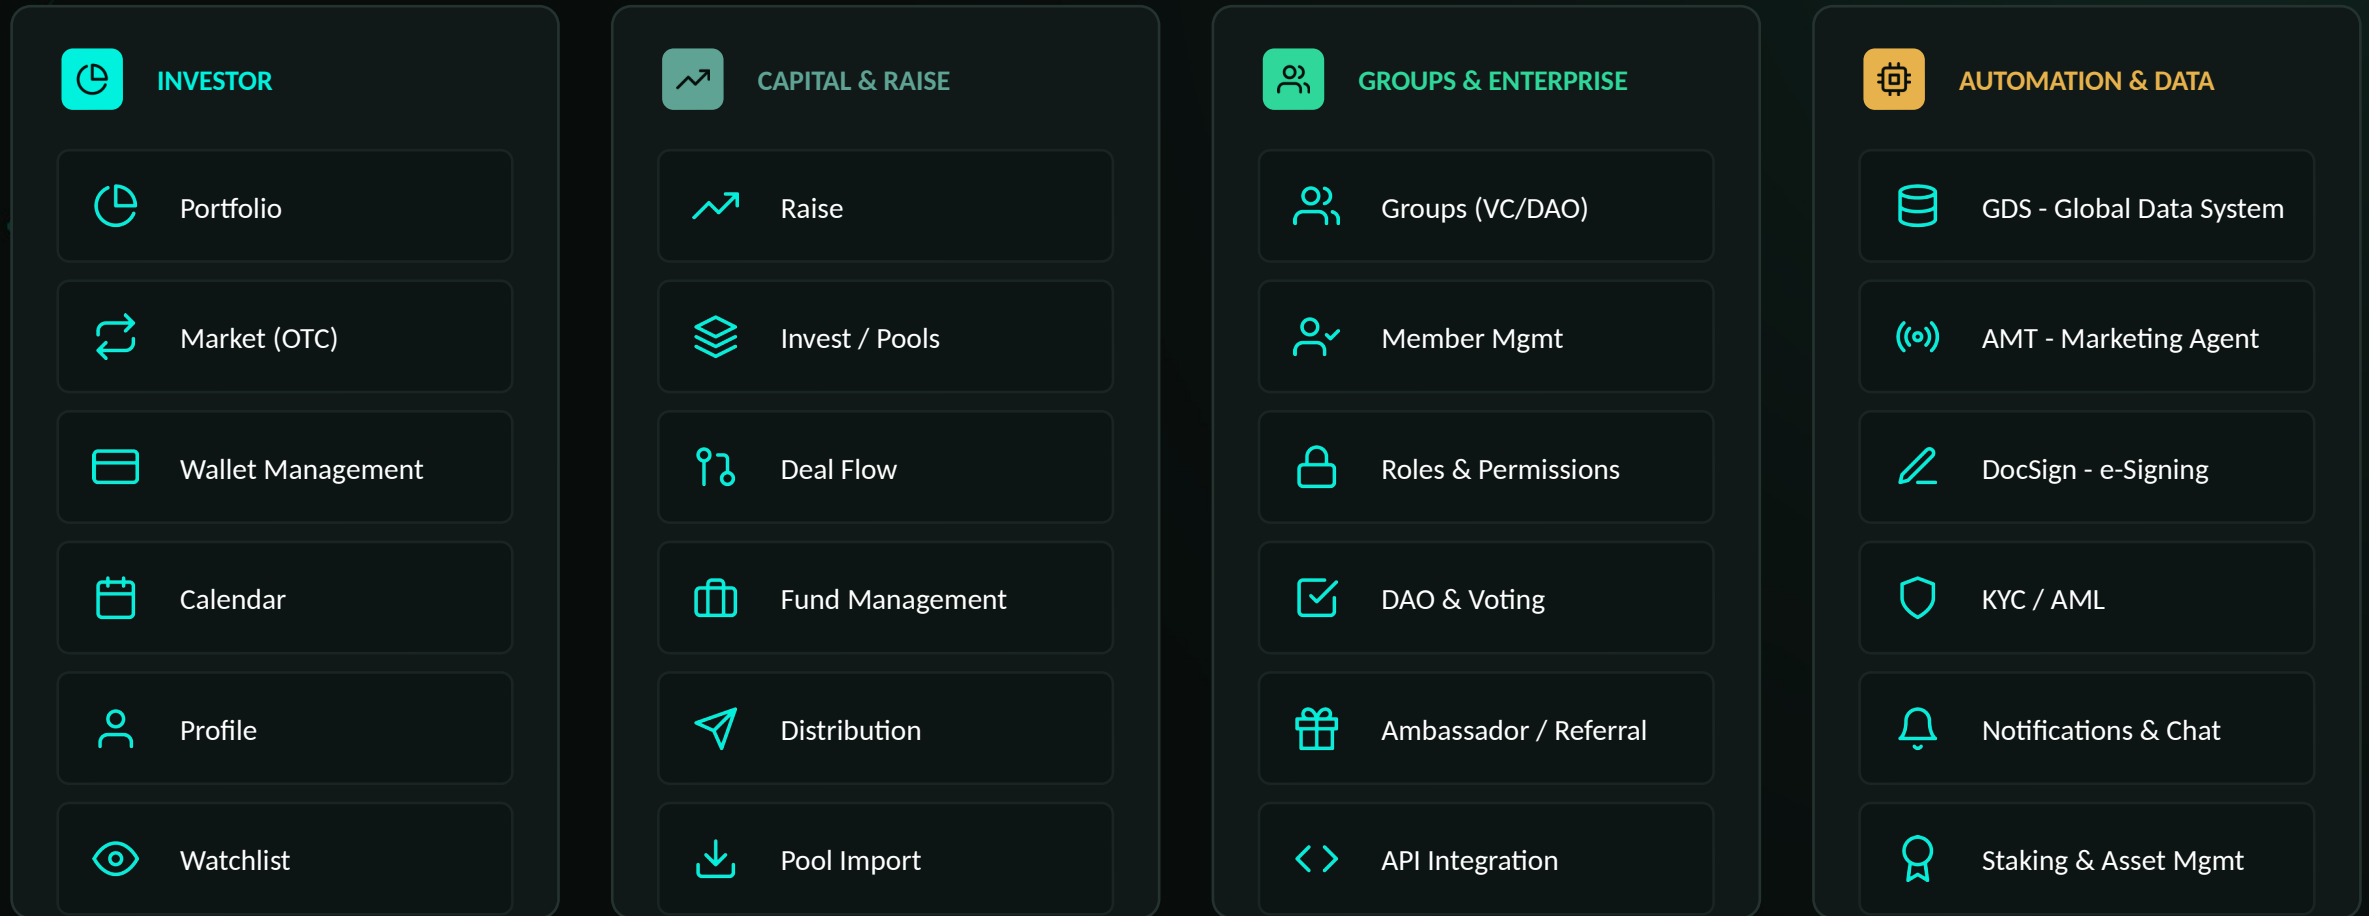

Access managed pools and IDO tiers in a few clicks.

Calendar

Every claim, unlock and event in one timeline.

20+ integrated modules on one data system

Every module runs on the Global Data System (GDS) - one database, live data across networks and modules.

Eight engines that cover your whole investment journey

Portfolio

Track every token, allocation and asset - including complex vesting - in one live dashboard across all your wallets.

Raise

Run presale, IDO, private and public rounds with transparent, automated allocation and distribution.

Invest

Join or lead investment groups; pool funds into IDO-tier allocations and invest alongside experts.

Market

An OTC marketplace to buy, sell and transfer allocations - including SAFE/SAFT and broker-managed sales.

Groups

One-click management for VCs and communities - members, funding, tiers, roles, performance and P&L.

Calendar

Never miss an unlock, vote or event across your portfolio, groups, wallets and watchlist.

Profile

A secure, self-service hub for your account, preferences and every platform feature.

GDS

The Global Data System connecting every module with seamless data flow and cross-chain smart contracts.

BUILT-IN AUTOMATION

Grow and operate on autopilot

AMT

Automated Marketing Agent

Automate outreach, onboarding and engagement - turn your community and pipeline into active investors without a separate growth stack.

DocSign

Automated Document & Contract Signing

Sign SAFE / SAFT / token-warrant and subscription documents natively inside the deal flow - no third-party tool, no broken hand-off.

Automation is built in, not bolted on. Marketing and in-platform signing live inside the same stack as your deals, portfolios and payouts - so operating a fund, syndicate or raise takes a fraction of the effort.

WHO IT'S FOR

Built for everyone in the private-market deal

Investors

Track every position and vesting schedule, join curated deals, and invest alongside experts - all in one dashboard.

Fund managers & VCs

Raise, allocate and manage members with one-click group tools, tiers, roles and real-time P&L.

Projects raising

Launch presale, private and public rounds with automated allocation, vesting and on-platform signing.

Communities & syndicates

Pool capital, run IDO-tier allocations and manage members transparently - no spreadsheets.

BUILT FOR WEB3

All chains, all wallets, non-custodial and compliant

All chains

One portfolio across every network, with MultiversX, Ethereum and BNB Chain leading the lineup.

All wallets

Connect every wallet you use, on any chain; you keep custody, always.

KYC / AML built in

Compliant onboarding and identity flows ready out of the box.

Automated distribution

Smart-contract linear and scheduled payouts, vesting and unlocks.

SAFE / SAFT ready

On-platform token-warrant, SAFE and SAFT sales with e-signing.

One data system

GDS keeps every module, wallet and chain in sync in real time.

WHY CRYPTOOL

The only platform that owns the full cycle

All-in-one

Discovery, raise, invest, portfolio, distribution and exit - no external tools, no manual workarounds.

Before, during & after listing

Capture value across the whole lifecycle, not just at the point of trade.

Made for groups

Purpose-built syndicate, VC and community management that nothing else offers.

Automated end-to-end

Marketing (AMT) and signing (DocSign) built in - operate at a fraction of the effort.

All chains, all wallets

Every network and every wallet in one view, with you always in custody.

One live data system

GDS keeps every position, wallet and chain in sync in real time.

THE TEAM

Operators and Web3 builders behind Cryptool

Ron

CEO & Founder

NETHERLANDS

Web3 angel investor. Founder of Web3 Syndicate; ran billion-dollar Oil & Energy projects and led engineering companies; invested in 500+ blockchain ventures.

Therese

COO

NORWAY

Web3 angel investor. Scaled startups to multi-million revenue; 20+ years in business and account management; client-growth specialist.

Nick

CFO

USA

Web3 angel investor. Ex-Director at BASF and VP at a leading energy firm; 17+ years in global finance, supply chain and strategy.

Jeffrey

CTO

NETHERLANDS

Web3 angel investor. Led complex, secure and compliant software delivery across internal and external teams before founding Cryptool.

Jeroen

CMO

NETHERLANDS

Secured 100+ strategic partnerships; 18+ years in commercial strategy, VC relations and data-driven marketing.

Billah

Full-Stack Lead Dev

PAKISTAN

6+ years in full-stack development and lead engineering across multiple companies. Stack: PERN - PostgreSQL, Express, React, Node.

Established in the Netherlands, 2022 · Incorporated in Switzerland, 2025
